

Boundary Divider Assembly Instructions

The Boundary Divider is very simple to assemble and can be done by one person with no tools required.

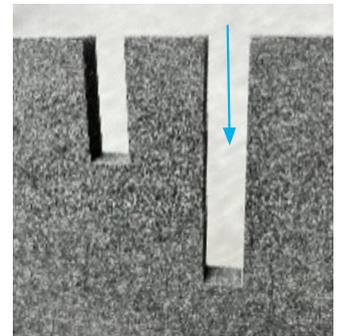

1. Assemble all the acoustic pieces into X shapes by using the central slot.

2. Lay out the base layer of your Boundary Divider X shapes to the correct width ie. 1150mm. Each X shape should have a small 25mm gap in-between each X shape.

3. Build up your Boundary Divider by inserting the next row of X shapes using the longer inside slots.

4. Repeat the rows until you get to your Boundary Divider to the finished height ie. 1500mm.

5. If building your Boundary Divider with a second colour, please follow the assembly instructions and use the images to guide you on where to place your second colour pieces ie. in vertical or horizontal format.

6. If you still need help to assemble your Boundary Divider, please watch this video:
